EPiX OKRs

Objective

1. Improve Speed of Onboarding

2. Improve Speed of Discovery

3. Improve Speed of Delivery

EPIx OKRs

Objective

1. Improve Speed of Onboarding
2. Improve Speed of Discovery
3. Improve Speed of Delivery
4. Improve Speed of Recovery
5. Deliver enhanced end-to-end engineer experience

Voice of the Customer

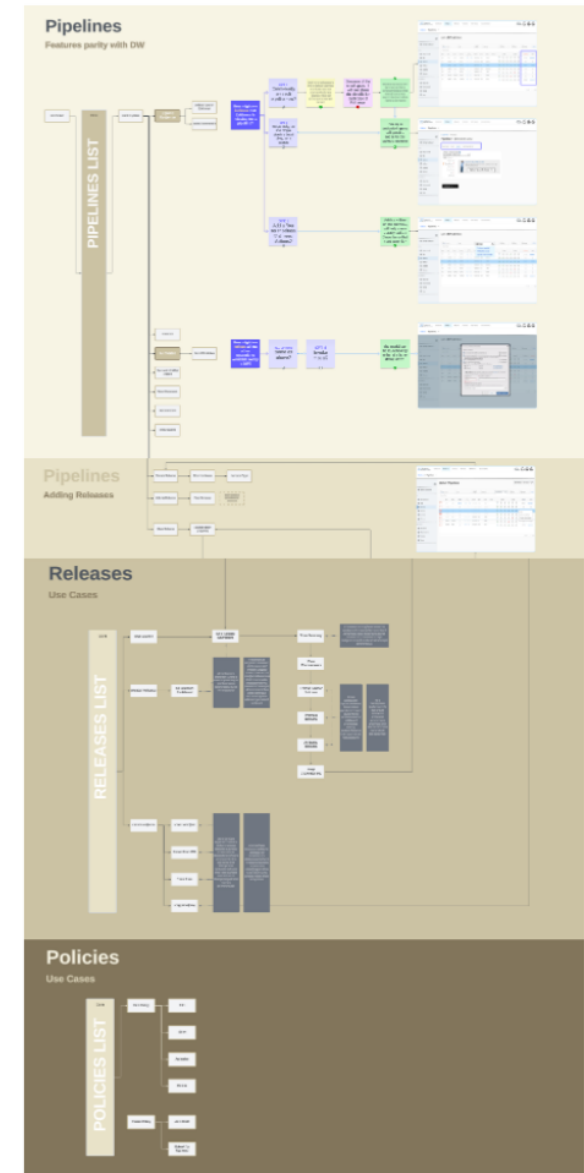

We paired the requests with our users' stories and started validating assumptions by conducting users' interviews.

Over the course of Q2 we have talked with **> 32** users across our domains and learned their pain points and suggestions.

“Developers spend majority of their time managing lower-level pipelines.”

“To create a Release, you must have already identified and selected the proper pipelines (= the branch and repo combination)—which means that you are not going to select the Feature Branch, but the Release Branch”

“Developers expect to see most recent pipelines rather than figuring out filters.”

Demo | Promotion Flow Testing

Problem Statement

Is the functionality of switching between creating and selecting an existing release intuitive?

Participants

- **Participants** – 6 Software Engineers
- **LOBs** – CB, CCB ,CIB & CTO
- **Tenure** – 0-11 years
- All users familiar with JPMC promotion and evidencing processes

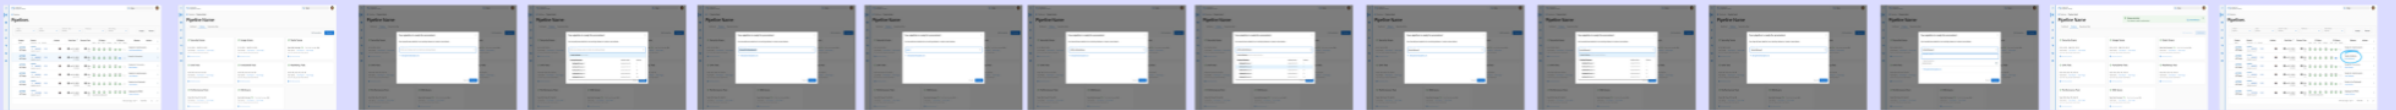

Key Findings

- Users had overall **positive** responses to bringing the **promotion flow into pipelines**.
- On the Evidence page the label for the **Promote** button should be differentiated from the one inside the modal.
- **Cards** – Info could be revisited:
 - Users would like to see V3s
 - Not everything is necessary for initial view, i.e. test tool
- Not intuitive to see two options on the pulldown menu for **releases**.
- Overall, the **language** could be improved to clarify options.

Earhart User Flows Analysis

Created by Penati, Denise, last modified just a moment ago

June 20, 2024

How do our key use cases meet our users' mental model?

Download the Report (PDF) >

View Figma file >

Conclusions

Out of the top 10 use cases, only 3 were not fully met. The top 3 use cases were: Release, Release, Release. These are the top 3 use cases that we need to focus on.

For the top 3 use cases, we need to focus on the top 3 use cases that we need to focus on.

For the top 3 use cases, we need to focus on the top 3 use cases that we need to focus on.

The screenshot displays the 'Policy Service' dashboard within the 'ZingStack Engineering Portal'. The interface includes a top navigation bar with 'Dashboard / Policy Service' and a search bar. A left sidebar contains navigation links: 'My Team', 'Dashboard', 'SOLC', 'Plans', 'Repos', 'List PRs', 'Reviews', 'Pipeline', and 'Notifications'. The main content area features a filter section with dropdowns for 'Search by name' (set to 'Simple'), 'Status' (set to 'All'), 'Collection Source' (set to 'All'), and 'Control Procedures' (set to 'All'). Below this is a table listing policies with columns for 'Policy', 'Status', and 'Last Modified'. The table contains seven entries, each showing a policy name, its ID, a link to view details, and its current status and modification date.

Demo | IEP Baseline User Testing

Goal

To form a **UX baseline for Build & Release** space in IEP, so that we can continuously improve our products. Create a user experience backlog.

Objectives

- Determine the **usability of the Alpha release** among engineers.
- Identify **pain points, challenges**, and areas for improvement.
- **Gather feedback** on feature prioritization for future iterations.
- Assess overall ease-of-use and likelihood of **adoption**.

Progress

- Defined a **strategy for deriving a baseline score** across IEP that is flexible to our spaces.
- Developed a method for **calculating scores from Usability Tests**. Including "Ease of Use" and overall "Perceived Usefulness."
- **5 Demo sessions** conducted with users that do not currently have access to the IEP.
- **4 Usability Tests** run with users that have access to the current IEP Alpha release.
