PRINCIPAL UX & ENTERPRISE SYSTEMS DESIGNER

Designing clarity for complex technical ecosystems. Transforming fragmented platforms into coherent systems that improve predictability, reduce systemic friction, and strengthen cross-functional execution. Experienced in translating backend complexity—workflows, and platform infrastructure—into role-based experiences that scale across large organizations. Exploring emerging technologies, including AI, as leverage points for platform evolution and operational integrity. Across industries—from logistics to healthcare to developer platforms—my work focuses on the same challenge: turning fragmented systems into coherent platforms that people can actually operate.

::: CORE COMPETENCIES

Systems & Platform Design:

Enterprise Platform Architecture • Complex Workflow Modeling • Multi-System Integration • Developer Experience (DevEx)

Strategy & Organizational Impact: UX

Strategy & Vision • Design Operations • Cross-Functional Leadership • Organizational Enablement

Emerging Systems: AI-Enabled

Systems • Platform Governance • Operational Integrity.

::: PROFESSIONAL EXPERIENCE

✦ J.P. MORGAN CHASE

Principal User Experience (VP)

Palo Alto, CA

2022 – Present

Experience Lead for Application Management & Secure Software Supply Chain (S3C), shaping developer platform experiences used by 40K+ engineers across the enterprise. Balancing hands-on systems design with team leadership and platform direction.

- **Re-architected eight core Pipelines workflows within a 12-week delivery window**, sequencing discovery ahead of backend build cycles to produce dev-ready designs that improved estimation accuracy and reduced downstream churn.
- **Conceptualized and authored proposals for AI-assisted agents** supporting UX discovery and documentation governance, and validated early automation opportunities (e.g., repository link integrity checks) using Copilot within the SDLC.
- **Scaled and structured a multidisciplinary UX team** from 4 to 11, establishing operating practices and research rhythms that strengthened execution quality and cross-functional alignment.
- **Elevated embedded research as a prioritization driver**, instituting recurring user studies and CAB reviews that sharpened focus on high-impact engineering workflows and minimized misaligned builds.
- Clarified complex SDLC journeys across Pipelines, Releases, and Secure Software Supply Chain initiatives—**translating backend constraints into coherent developer workflows**.
- Co-led Innovation Sprints for three years, shaping the future of the Engineering Portal; **awarded 1st Place for platform vision** and impact in 2025.

✦ JOHN MUIR HEALTH (rebadged to Optum)

Lead, User Experience

Walnut Creek, CA

2013 – 2022

End-to-end UX lead supporting a health system serving ~550K patients. Partnered across product, engineering, marketing, and clinical leadership during large-scale digital transformation and post-acquisition transition to the Optum consulting model.

- Designed and launched a responsive, SSO-enabled physician portal centralizing calendars, secure communications, training, and account management to streamline coordination and reduce administrative friction across care teams.
- Designed and launched JMH's first in-house native patient mobile app, extending Epic's EHR beyond its standard mobile offering to deliver a differentiated, integration-ready experience that positioned JMH for broader digital ecosystem expansion.
- Led UX strategy for eVisits and online scheduling, redesigning digital intake flows and care pathways to extend access beyond traditional hours and attract 100+ net-new patients per month.
- Designed telehealth and COVID digital triage journeys during the pandemic, maintaining continuity of care while reducing in-person visit dependency.
- Led discovery and experience architecture for the UCSF-JMH Accountable Care Network (Canopy Health), defining the digital foundation for a unified clinical and insurance portal integrating multi-EMR records with cost and claims visibility.
- Through JMH's Search for Success innovation program, used research and workflow modeling to build the business case for activating Epic's Ticket Scheduling capability—demonstrating operational efficiencies and earning the program's innovation award.
- Through the same innovation program, developed a Membership & Loyalty strategy aligning rewards-based engagement with Population Health goals and long-term patient retention, presenting the roadmap vision to Strategy and CIO leadership.
- Recognition: Optum Superhero Award (Accessibility & Patient Advocacy).

::: EDUCATION & SPECIALIZATIONS

Oxford AI Program, Saïd Business School

AI for UX, Nielsen Norman Group

Human-Computer Interaction, MIT

Internet Design & Technology, SFSU

Industrial & Behavioral Design, CCF & ISIA — Milan, Italy

::: LANGUAGES

Native Italian. Fluent English.
Conversational Spanish. Fluent in the language of systems and design.

::: TOOLS & SYSTEMS

Figma • Sketch • Miro • Lucidchart •
Jira • Confluence • Git/GitHub •
Firebase • AI-assisted discovery

::: VOLUNTEERING

Teens in Tech — Co-led STEAM programs for youth (ages 8–12)

Women in Design — Co-launched JPMC's Women in Design community

HRO Ambassador — Promoted High Reliability practices across digital teams.

✈ SYMANTEC

Principal, User Experience

San Francisco, CA

2010 – 2013

Led strategic UX for Symantec's flagship Data Loss Prevention (DLP) platform, serving as sole designer across five engineering teams (80+ engineers) during a pivotal shift in enterprise security following high-profile data leaks (e.g., WikiLeaks). Drove system-level clarity across endpoint, network, cloud, storage, and early IoT considerations.

- o Reframed Symantec's DLP platform from a channel-based, data-centric model to an identity-centric architecture—eliminating costly “case folder” re-architecture and introducing a unified Users view that correlated cross-channel incidents to a single identity.
- o Led cross-product integration of DLP and Data Insight, aligning global teams through task modeling, journey mapping, and a three-day war-room; reframed a high-stakes Technical Advisory Board session with 80 enterprise customers from UI critique to workflow validation.
- o Standardized workflows across DLP's four core product areas, introducing cohesive interaction patterns that reduced duplication and strengthened consistency across the enterprise security suite.
- o Conceptualized and formalized “gDLP” (Gamification for Data Loss Protection), embedding proactive risk checks and rewards-based learning into user workflows to reduce incident volume and improve signal-to-noise ratio in enterprise remediation efforts.
- o Invited speaker, Cutting Edge Conference (2012: “Gamification for Enterprise”; 2013: “Can UX Be Agile?”).
